

## With an eye for the sweet life

Here are two great tips for new bright eyes – from Sweden’s largest private eye clinic:

Start by correcting your visual defect quickly, safely and without pain, with an RLE treatment (Refractive Lens Exchange). In most cases, the surgery allows you to completely avoid glasses or contact lenses.

Then make sure that it really shows how good you feel – now when it’s time to live the sweet life. With an eyelid surgery, our skilled surgeons highlight your eyes’ original beautiful shape – so that you feel years younger.

We investigate and deal with all kinds of eye diseases. Our 20 ophthalmologists perform 4,500 cataract surgeries, several thousand laser surgeries and many operations of retinal diseases.

A large part of our time is devoted to the diagnosis of glaucoma – an insidious eye disease in which the symptoms arise slowly, often without the patient noticing.

We are located in Stockholm at Sophiahemmet on Valhallavägen 91. Contact us to book an initial examination.
